

Orfom[®] and Molyflo[®] Collectors

Orfom[®] and Molyflo[®] Collectors are highly effective hydrocarbon based reagents for molybdenum and copper-molybdenum mineral sulfides flotation operations. These commercially proven collectors provide maximum sulfide mineral recoveries when added to the primary grinding stage. These products are very effective as the principal collector in primary molybdenum concentrators or as a co-collector in mixed mineral sulfide flotation operations. Our products are compatible with all conventional collectors like Orfom[®] MC collectors, xanthates, frothers, and depressants (such as Orfom[®] D8 depressant and NaSH). These products are stable over typical pH ranges.

Typical Values of Oil Based Collectors

Characteristics	Orfom [®] MCS collector oil	Molyflo [®] collector oil	Orfom [®] MCO collector oil	Orfom [®] MCX collector oil	ASTM Method
Specific Gravity at 15.6 °C (g/ml)	0.825	0.942	1.01	0.811	D1298
Density Conversion (lbs/gal)	6.88	7.86	8.43	6.77	D1298
Flash Point (°C)	79	56	59	113	D93
Viscosity at 25 °C (mm ² /sec)	2.3	3.4	45.6	7.4	D445
Pour Point (°C)	-16	-28	-35	-51	D97

Orfom[®] MCS Collector

- A highly effective, economical, high flashpoint reagent for optimum recovery as a primary collector in molybdenum sulfide mineral flotation
- Maximizes molybdenite recovery while minimizing pyrite recovery
- High flashpoint and non-seasonal variation provides benefits over typical streams like diesel and kerosene
- REACH compliant and classified as non-carcinogenic

Molyflo[®] Collector

- Considered the industry standard collector for molybdenite ores
- A medium viscosity collector which provides superior recovery for wide range particle size ores
- Maximizes molybdenite recovery while minimizing pyrite recovery
- REACH compliant

Orfom[®] MCO Collector

- Specially formulated higher viscosity reagent with proven recovery advantages as a co-collector in copper-molybdenum porphyry ores
- Demonstrates superior performance when added with secondary sulfide based collectors like Orfom[®] MC collectors directly into the primary grinding circuit.

Orfom[®] MCX Collector

- High flashpoint, synthetically produced, collector for use in fine grind sulfide-containing ores
- The absence of aromatics and nitrogen/sulfur oxides emission components provides exceptional recoveries where stringent environmental conditions are required
- Classified as non-carcinogenic, non-hazardous and is REACH compliant
